Fellow sixth graders, an alien and a human, become unlikely friends in this hilarious, fast-paced, and accessible first book in the sci-fi series Sixth-Grade Alien from the bestselling author of Aliens Ate My Homework, Bruce*

Coville. Sixth grade can be tough. But starting sixth grade as the only alien on the planet seems impossible. When Pleskit Meenom, the son of the first alien ambassador to earth, finds out he's going to public school, he's less than thrilled. Especially after what happened on their last planet. Tim Tompkins, on the other hand, couldn't be more excited to meet a real alien—even if some of his classmates are warier of the first purple kid in their class. Tim is determined to befriend Pleskit and secretly hopes he may have finally found someone who feels as out of place as he does. But when angry mobs, cultural differences, and intergalactic plots get in the way, their friendship—and maybe even the planet—could be in danger. What determines the focus of a researcher's interest, the sources of inspiration for a study, or the variables scrutinized? If we were to examine the antecedents of these decisions, they would surely emerge as accidents of circumstance--the personal experiences of the researcher, the inspiration of early mentors, the influence of contemporary colleagues--all tempered by the intellectual currents that nurture the researcher's hypotheses. Among the accidents that mold the careers of researchers is geographic location. The culture in which a research program emerges helps determine both its very subject and its method. The primary purpose of this book is to assist those interested in the scientific study of children's social competence in transcending the boundaries imposed both by geography and by selective exposure to the highly diverse schools of thought that have led to interest in this field. Most of these ideas were presented and exchanged at an Advanced Study Institute entitled "Social Competence in Developmental Perspective" held in Savoie, France, in July 1988. This Institute was attended by scholars from France, England, Northern Ireland, Germany, Italy, Norway, Spain, Portugal, Netherlands, Canada, the United States and Brazil. Those who participated will recognize that the metamorphosis from lecture to chapter has necessitated many changes. In order to accommodate the reader who may be unfamiliar with the field, more attention has been paid here to identifying the theoretical contexts of the research described. In this follow-up to *President of the Whole Fifth Grade*, Brianna navigates her toughest challenge yet: middle school! Brianna Justice is determined to raise enough money for the big class trip to Washington, D.C., but she's up against a lot: classmates who all pretend to be something they're not, a new nemesis determined to run her out of office, and the sinking feeling she's about to lose her two best friends for good. But just when she begins to lose hope, she comes to realize that sometimes surprises can turn out even better than the best-laid plans. Sherri Winston tells a story brimming with humor and heart as Brianna navigates the ins and outs of middle school, discovering that inspiration can come when you least expect it. From the Author's Notes: "I didn't write this book because I consider myself a particularly talented writer. This book is simply a collection of stories that I wrote throughout the sixth grade because I wanted to keep some memories of my last year of elementary school if I were to look back at it several years later. The years that I spent in kindergarten and first grade can't be recalled that well when I try. I only remember them in pieces, like scenes in a movies with no sound -- vaguely, sometimes without the details, and some parts better or less well than others. I didn't want the same to happen to my last year of elementary school. I also wanted to be able to read about our experiences -- as sixth graders in Korea -- as we experience it or would like to experience it . . ." *180 Days of Science* is a fun and effective daily practice workbook designed to help students explore the three strands of science: life, physical, and earth and space.
